Experience Live Therapeutic Music

Bringing Comfort and Relief Through The Healing Power of Therapeutic Music

What is Capstone's Therapeutic Music Program?

Live Therapeutic Music (LTM) is a non-pharmaceutical intervention that complements traditional medical care plans.

For millennia, music has been used to facilitate healing and comfort. For hospice patients in particular, terminal agitation is a common occurrence and is difficult to manage.

LTM sessions typically last 20 - 40 minutes and focus on the specific needs of each patient at the time of the session. Sessions typically result in decreased agitation, anxiety, and pain, while increasing the effectiveness of prescribed medications.

“Sometimes, music touches patients in places where medicine just can't reach.”

- Hospice Nurse

Live Therapeutic Music is Recommended for Patients Exhibiting the Following Symptoms:

Respiratory Distress

Pain

Terminal Agitation

Anxiety

LTM Interventions Can Be Life-Changing for Patients

HOW IT WORKS

Live Therapeutic Music (LTM) is an art form based on the science of sound. Various components of music affect the central nervous system helping patients to relax.

LTM interventions complement traditional clinical measures to help the patient manage pain, stress, and agitation. Even when patients are unconscious, the eardrums continue to vibrate, allowing Live Therapeutic Music to benefit patients with all types of symptoms.
